

Bulletin # 491

June 2, 2000

BENEFIT CHANGES TO NBPDP

Please find attached lists of additions/deletions to the New Brunswick Prescription Drug Program Formulary, effective June 2, 2000.

INCLUDED IN THIS UPDATE:

1. SPECIAL AUTHORIZATION – Additions and changes

2. CHANGES IN BENEFIT STATUS – Drug products previously listed under special authorization that are now regular benefits.

3. BENEFIT ADDITIONS WITH QUANTITY LIMITS

4. REGULAR BENEFIT ADDITIONS

Claims for products that are reimbursed at Actual Acquisition Cost (AAC) up to July 13, 2000 will be subject to a Maximum Allowable Price (MAP) effective, July 14, 2000.

5. PRODUCTS DISCONTINUED BY THE MANUFACTURER

The New Brunswick Prescription Drug Program will continue to reimburse claims for products that are discontinued by the manufacturer for a period of two years from the discontinued date of the product.

6. CISAPRIDE (Prepulsid) WITHDRAWN

http://www.hc-sc.gc.ca/english/archives/warnings/2000/2000_56e.htm

Health Canada has advised that the prokinetic drug, Prepulsid (cisapride) will no longer be available from pharmacies effective August 7, 2000. Prepulsid, marketed by Janssen-Ortho Inc., is indicated for the treatment of gastroparesis, intestinal pseudo-obstruction and gastroesophageal reflux disease which is refractory to lifestyle modifications, antacids and gastric acid reducing agents. The decision to withdraw Prepulsid from the market is founded on the association of the drug with serious cardiac arrhythmias (e.g. ventricular tachycardia, *torsades de pointes* and ventricular fibrillation) and sudden cardiac deaths.

Cisapride (Prepulsid) will be delisted as a NBPDP benefit effective June 15, 2000.

Domperidone and metoclopramide are upper gastrointestinal motility modifiers currently listed as benefits.

1. SPECIAL AUTHORIZATION (PART B) - ADDITIONS:

CELECOXIB (CELEBREX)

Tablets 100mg and 200mg

For the treatment of osteoarthritis and rheumatoid arthritis in patients who have at least one of the following factors:

- Past history of ulcers
- Concurrent warfarin therapy
- Concurrent prednisone therapy
- Failure or intolerance to at least two other NSAIDs (e.g. ibuprofen, diclofenac, naproxen)

Recommended maximum daily doses: 200mg for osteoarthritis
400mg for rheumatoid arthritis

Note: Celecoxib is a regular benefit for beneficiaries age 65 and over (Plans A,V).

CLOPIDOGEL (PLAVIX)

Tablets 75mg

1. Secondary prevention of vascular ischemic events (myocardial infarction, stroke) in patients with a history of symptomatic atherosclerotic disease who have had treatment failure or are intolerant or allergic to ASA.
2. For the prevention of thrombosis post intracoronary stent implantation for a period of 28 days. Prescriptions written by invasive (interventional) cardiologists for this procedure do not require special authorization. The claims adjudication system will automatically recognize the NBPDP physician ID number of the invasive cardiologists at the Atlantic Health Sciences Centre.

LEUPROLIDE (LUPRON DEPOT)

Injection 11.25mg (3-month Slow Release)

For the hormonal management of endometriosis, including pain relief and reduction of endometriotic lesions. Requests will be considered for women age 18 and older. Approval limits payment to a maximum of 6 months of therapy.

TAMSULOSIN HYDROCHLORIDE (FLOMAX)

Sustained-Release Capsules 0.4mg

For patients who have experienced treatment failure or intolerance to alternative agents (e.g. terazosin, doxazosin).

ROFECOXIB (VIOXX)

Tablets 12.5mg & 25mg

For the treatment of osteoarthritis in patients who have at least one of the following factors:

- Past history of ulcers
- Concurrent warfarin therapy
- Concurrent prednisone therapy
- Failure or intolerance to at least two other NSAIDs (e.g. ibuprofen, diclofenac, naproxen)

Recommended maximum daily dose: 25mg for osteoarthritis

Note: Rofecoxib is a regular benefit for beneficiaries age 65 and over (Plans A,V).

SPECIAL AUTHORIZATION (PART B) - CHANGES:

BOTULINUM TOXIN TYPE A (BOTOX) – *new indication added*

Lyophilized concentrate for injection

Only requests for an approved indication for the product will be considered. Approved indications are:

- (i) treatment of strabismus and blepharospasm associated with dystonia, including benign essential blepharospasm or VII nerve disorders in patients 12 years of age and above.
- (ii) cervical dystonia (spasmodic torticollis).
- (iii) *treatment of dynamic equinus foot deformity due to spasticity in pediatric cerebral palsy patients.*

(See Formulary for complete criteria.)

LAMOTRIGINE (LAMICTAL) – *new indication and strength added*

Tablets 25mg, 100mg and 150mg and Chewable Tablets 5mg

1. For the treatment of refractory epilepsy not well controlled with conventional therapy.
2. *As adjunctive therapy for the management of the seizures associated with Lennox-Gastaut syndrome.*

RISPERIDONE (RISPERDAL) – *new indication and strengths added*

Tablets 0.25mg, 0.5mg, 1mg, 2mg, 3mg and 4mg

1. For the management of manifestations of schizophrenia and related psychotic disorders. Advice from a psychiatrist is suggested prior to starting therapy.
2. *For use in severe dementia for the short-term symptomatic management of inappropriate behavior due to aggression and/or psychosis.*
(Risperidone 0.25mg, 0.5mg, 1mg tablets are regular benefits of Plans A and V).

Prescriptions written by New Brunswick psychiatrists do not require special authorization. Subsequent refills ordered by other practitioners will not require special authorization.

2. CHANGES IN BENEFIT STATUS:

Drug products previously listed under special authorization that are now regular benefits.

- **DOXAZOSIN** (Cardura, Gen-Doxazosin, Apo-Doxazosin) 1mg, 2mg, 4mg Tablets
- **LAMIVUDINE** (3TC) 10mg/mL Oral solution and 150mg Tablets
- **VENLAFAXINE** (Effexor XR) 37.5mg, 75mg, and 150mg Capsules

3. BENEFIT ADDITIONS WITH QUANTITY LIMITS:

LOW MOLECULAR WEIGHT HEPARIN products have been added to the NBPDP Formulary as benefits for Plans AEF+18VW **for the initial treatment of deep vein thrombosis (DVT)**. One prescription claim annually will be automatically reimbursed, up to the average amount required for one DVT treatment (approximately 10 days of therapy). If additional medication is required subsequent to the initial prescription, a request should be made through special authorization.

PRODUCT NAME Dosage Form	PACKAGE FORMAT	10 DAY TREATMENT QUANTITY**
Dalteparin (Fragmin) 25,000 IU/mL multidose vial	3.8mL	3.8mL x 2 vials @8mL
Dalteparin (Fragmin) 25,000 IU/mL prefilled syringes	0.4mL	0.4mL x 10 syringes = 4mL
	0.5mL	0.5mL x 10 syringes = 5mL
	0.6mL	0.6mL x 10 syringes = 6mL
	0.72mL	0.72mL x 10 syringes @8mL
Enoxaparin (Lovenox) 10mg (1,000 IU)/0.1mL multidose vial	3mL	3mL x 5 vials = 15mL
Nadroparin (Fraxiparin Forte) 19,000 IU/mL prefilled syringes	0.6 mL	0.6mL x 10 syringes = 6mL
	0.8 mL	0.8mL x 10 syringes = 8mL
	1.0 mL	1.0mL x 10 syringes = 10mL
Tinzaparin (Innohep) 10,000 IU/mL multidose vial	2mL	2mL x 8 vials = 16mL
Tinzaparin (Innohep) 20,000 IU/mL multidose vial	2mL	2mL x 4 vials = 8mL
Tinzaparin (Innohep) 20,000 IU/mL prefilled syringes	0.5 mL	0.5mL x 10 syringes = 5mL
	0.7 mL	0.7mL x 10 syringes = 7mL
	0.9 mL	0.9mL x 10 syringes = 9mL

**** Please note: When submitting a claim for a product listed in the table above please ensure it is billed as milliliters (mL) dispensed.**

VALACYCLOVIR (VALTREX)

Caplets 500mg

For the treatment of acute herpes zoster (shingles): 1g (2 caplets) TID x 7 days.

- For persons 50 years of age and over. Persons in this age group have a higher incidence of post-zoster pain.
- A one-time prescription of 21, 000mg (21 doses of 1g) will be reimbursed without requiring SA.
- Therapy should be initiated within 72 hours of onset of rash. The drug has little benefit if started after 72 hours.

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

A handwritten signature in black ink that reads "Shirley Simkins". The signature is written in a cursive, flowing style.

Bulletin # 502

December 8, 2000

BENEFIT CHANGES TO NBPDP

Please find attached lists of additions to the New Brunswick Prescription Drug Program Formulary, effective December 8, 2000.

Included in this bulletin:

- **Benefit Status Summary**
Drugs for the Treatment of Osteoporosis and Paget's Disease
- **Special Authorization** – Additions and Revised Criteria
- **Drugs Reviewed And Not Listed**
- **Regular Benefit Additions**
Claims for products that are reimbursed at Actual Acquisition Cost (AAC) up to January 18, 2000 will be subject to a Maximum Allowable Price (MAP) effective, January 19, 2000.
- **Products Discontinued By The Manufacturer**
The New Brunswick Prescription Drug Program will continue to reimburse claims for products that are discontinued by the manufacturer for a period of two years from the discontinued date of the product.

Formulary Publication Change

The NBPDP Formulary will now be published once annually in April. An electronic version of the Formulary will be maintained on the NBPDP webpage: <http://www.gov.nb.ca/0212/en/index.htm>
Updates will be issued as required.

New Fax Numbers - Special Authorization Unit

Requests for special authorization should now be sent to:
Local Fax # 506-867-4872
Toll Free Fax # 1-888-455-8322

If you have any questions or concerns, please contact our office at 1-800-332-3691.

BENEFIT STATUS SUMMARY

Drugs for the Treatment Of Osteoporosis and Paget's Disease

A review of agents used to treat osteoporosis, as well as those used for the treatment of Paget's Disease, has been conducted.

Treatment of Osteoporosis:

Osteoporosis is characterized by low bone mass and architectural changes within the bone, resulting in an increase in bone fragility and a greater susceptibility to fracture. While bone mineral density (BMD) is an important risk factor for fracture, at least 16 other independent risk factors have been attributed to hip fracture in women. Therefore, the treatment of osteoporosis is a multi-faceted approach. Drug therapy to increase bone mineral density must also be accompanied

with adequate intake of calcium and vitamin D, fall avoidance techniques, weight bearing exercise programs and smoking cessation.

BMD is a surrogate marker used to measure the efficacy of drugs that treat osteoporosis. A more relevant measure of efficacy is a drug's ability to reduce the incidence of fractures. Therefore, the NBPDP reviewed fracture data for hormone replacement therapy, etidronate, alendronate, risedronate, raloxifene and intranasal calcitonin. While there is evidence to show that all of these drugs increase BMD, **the increase in BMD does not necessarily correlate with a reduction in fracture rates.** The findings are summarized in the following table:

Drug and Dosage in the Treatment of Osteoporosis	Approximate Monthly Cost to the NBPDP	Is there evidence the drug reduces the incidence of vertebral fractures?	Is there evidence the drug reduces the incidence of hip fractures?
Oral Hormone Replacement Therapy Various regimens including a progestin	\$4.75 - \$8.80	Yes (Retrospective studies only)	Yes (Retrospective studies only)
Transdermal Hormone Replacement Therapy Various regimens including a progestin	\$14.30 - \$20.30		
Etidronate (Didronel) 400 mg daily for 14 days, stop 76 days and repeat	\$13.25	No	Observational data suggests a reduction
Etidronate (Didrocal) 400 mg daily for 14 days then 1,250 mg calcium carbonate daily for 76 days and repeat	\$14.25		
Alendronate (Fosamax) 10 mg daily	\$53.40	Yes	Yes
Risedronate (Actonel) 5 mg daily	\$54.00	Yes	Yes
Raloxifene (Evista) 60 mg daily	\$50.70	Yes	No
Intranasal calcitonin (Miacalcin) 200 IU daily	\$57.00	The evidence is equivocal	No

Hormone replacement therapy (HRT) is considered first line therapy for the treatment of osteoporosis in post-menopausal women. (The Canadian Consensus Conference on Menopause and Osteoporosis, Journal SOGC, 1998).

Benefit Status:

Most hormone replacement therapies are full benefits in the NBPDP. Etidronate (Didronel and Didrocal) is also a full benefit in the NBPDP. Balancing cost with fracture rate evidence, the following special authorization criteria will be used for alendronate, risedronate, raloxifene and intranasal calcitonin:

Alendronate

(Fosamax)

- Tablets 10 mg
- Tablets 40 mg

Revised Criteria

- For the treatment of Paget’s disease.
- For the treatment of osteoporosis* when hormone replacement therapy (HRT) is declined, not tolerated or contraindicated.

Risedronate

(Actonel)

- Tablets 5 mg
- Tablets 30 mg

New Addition

- For the treatment of Paget’s disease.
- For the treatment of osteoporosis* when hormone replacement therapy (HRT) is declined, not tolerated or contraindicated.

Raloxifene

(Evista)

- Tablets 60 mg

New Addition

- For the treatment of post-menopausal osteoporosis* when hormone replacement therapy (HRT) is declined, not tolerated or contraindicated.

Calcitonin Salmon

(Miacalcin)

- 200 IU Nasal Spray

New Addition

- For the treatment of osteoporosis* when hormone replacement therapy (HRT) is declined, not tolerated or contraindicated, and alendronate, risedronate and raloxifene have failed, are not tolerated or are contraindicated.
- For pain associated with osteoporotic fragility fractures, bone metastases, pathological fractures (short-term coverage of up to 12 weeks).

* Osteoporosis is defined as a bone mineral density (BMD) at least 2.5 standard deviations below the young adult mean (T score ≤ -2.5) and/or the presence of osteoporotic fractures. (World Health Organization definition).

SPECIAL AUTHORIZATION (PART B) - ADDITIONS

Lamivudine

(*Heptovir*)

- Tablets 100 mg
- Solution 5 mg/mL

- For the treatment of patients with chronic hepatitis B with evidence of hepatitis B replication, defined as:
 1. HBsAg positive for at least 6 months
 2. Evidence of active viral replication (HBeAg positive)
 3. ALT level elevated on at least 3 consecutive occasions over a 3 month period.
 - Prescriptions written by New Brunswick internal medicine specialists do not require special authorization.
-

Repaglinide

(*Gluconorm*)

- Tablets 0.5mg, 1mg, 2mg

- For patients with type 2 diabetes who are not adequately controlled by diet and exercise and glyburide and/or metformin or who have frequent or severe hypoglycemic episodes despite dosage adjustment of glyburide.
-

Rosiglitazone

(*Avandia*)

- Tablets 2mg, 4mg, 8mg

- For patients with type 2 diabetes who are not adequately controlled by diet, exercise and drug therapy. Drug therapy should include a trial of sulfonylurea and metformin, alone and in combination, unless one of these agents is not tolerated or is contraindicated.
-

Calcitonin Salmon (*Miacalcin*)

Raloxifene (*Evista*)

Risedronate (*Actonel*)

- See benefit status summary of drugs for the treatment of osteoporosis and Paget's disease for SA criteria.

SPECIAL AUTHORIZATION (PART B) - REVISED CRITERIA

Filgrastim

(*Neupogen*)

- Injection 300 mcg/1mL
- Injection 480 mcg/1.6mL

- **General**
Filgrastim must be prescribed or requested by a certified hematologist or medical oncologist.
- **Use For Chemotherapy Support**
 - a) *Primary prophylaxis:*
For use in previously untreated patients receiving a moderate to severely myelosuppressive chemotherapy regimen (i.e. $\geq 40\%$ incidence of febrile neutropenia). Febrile neutropenia is defined as a temperature $\geq 38.5^{\circ}\text{C}$ or $> 38^{\circ}\text{C}$ three times in a 24 hour period and neutropenia with an absolute neutrophil count (ANC) $< 0.5 \times 10^9/\text{L}$.
 - b) *Secondary prophylaxis:*
For use in patients receiving myelosuppressive chemotherapy who have experienced an episode of febrile neutropenia, neutropenic sepsis or profound neutropenia in a previous cycle of chemotherapy; or

Filgrastim
(Neupogen)

- Injection 300 mcg/1mL
- Injection 480 mcg/1.6mL

(continued)

For use in patients who have experienced a dose reduction or treatment delay longer than one week, due to neutropenia.

c) Dosing for Chemotherapy support:

The manufacturer recommends an initial dose of 5mcg/kg/day. When dose scavenging techniques are not available, the following recommendations are suggested:

- Patients ≤70 kg use 1mL vial (300mcg) DIN 01968017
- Patients > 70 kg use 1.6mL vial (480mcg) PIN 0099900

- **Use For Non-Malignant Indications**

- Treatment of congenital neutropenia, idiopathic neutropenia or cyclic neutropenia in patients with recurrent clinical infections.
- Drug-induced neutropenia (e.g. antiviral therapy in patients with HIV).
- Refer to product monograph for dosing recommendations.

- **Use In Stem-Cell Transplantation**

a) Mobilization:

As an adjunct to progenitor cell transplantation, for mobilization of peripheral blood stem cells (PBSC).

- The recommended dosage is 10mcg/kg/day.

b) Reconstitution/Engraftment:

Post bone marrow transplantation (BMT) or PBSC transplantation to speed hematopoietic reconstitution.

- The recommended dosage is 5mcg/kg/day.

- **Unacceptable Use**

Treatment of febrile neutropenia or in the prevention of febrile neutropenia in the palliative setting.

DRUGS REVIEWED AND NOT LISTED IN THE NBPDP FORMULARY

Becaplermin
(Regranex) 0.01% Gel

- There is modest clinical evidence of benefit and the cost of the product is very high.

NPH, Toronto, 30/70 Insulin
(Novolin Set)
Disposable syringes

- Offers no therapeutic advantage and is significantly more expensive compared to the Novolin Penfill cartridges.

Oseltamivir
(Tamiflu) 75 mg capsules

- The clinical benefit is limited and there is insufficient efficacy evidence in high-risk patients.

Zanamivir
(Relenza) 5 mg Inhalation

- The clinical benefit is limited and there is insufficient efficacy evidence in high-risk patients.

BENEFIT CHANGES TO NBPDP

Please find attached lists of **interchangeable product additions** to the New Brunswick Prescription Drug Program Formulary and additional products subject to Maximum Allowable Price (MAP).

BENEFIT ADDITIONS: effective March 2001

Claims for products that are reimbursed at Actual Acquisition Cost up to May 18, 2001 will be subject to a Maximum Allowable Price (MAP) effective May 19, 2001.

For purposes of special authorization, MAPs have been established on all interchangeable products in New Brunswick.

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

Debbie LeBlanc
New Brunswick Prescription Drug Program

Bulletin # 514

June 14, 2001

BENEFIT CHANGES TO NBPDP

Please find attached lists of additions to the New Brunswick Prescription Drug Program Formulary, effective June 14, 2001.

Included in this bulletin:

- **Special Authorization** – Additions
- **Regular Benefit Additions**
Claims for these products will be reimbursed at Actual Acquisition Cost (AAC).
- **Products Discontinued By The Manufacturer**
The New Brunswick Prescription Drug Program will continue to reimburse claims for products that are discontinued by the manufacturer for a period of two years from the discontinued date of the product.

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

Debbie LeBlanc
New Brunswick Prescription Drug Program

NBPDP PHAR/PHYS

SPECIAL AUTHORIZATION (PART B) - ADDITIONS

Amlodipine Besylate

(Norvasc)

- Tablets 5mg and 10mg

1. For the management of angina
2. For the treatment of mild to moderate hypertension patients in whom the use of formulary alternatives is ineffective, not tolerated or contraindicated.

Prescriptions written by New Brunswick internal medicine specialists do not require special authorization. Subsequent refills ordered by other practitioners will not require special authorization.

Dipyridamole Extended Release / ASA Immediate Release

(Aggrenox)

- Capsules 200mg/25mg

- For the secondary prevention of ischemic stroke/TIA in patients who have experienced a recurrent thrombotic event (stroke, symptoms of TIA) while taking ASA.

Epoetin Alfa

(Eprex) - *New formats added to current listing*

- 6000 and 8000 IU pre-filled syringes

1. Treatment of anemia associated with chronic renal failure. Note: patients on dialysis (end-stage renal disease) receive epoetin through the dialysis units.
2. Treatment of transfusion dependent anemia related to therapy with zidovudine in HIV-infected patients

Telmisartan

(Micardis)

- Tablets 40mg and 80mg

- For the treatment of hypertension in patients who require an ACE inhibitor but cannot tolerate it due to side effects.

BENEFIT CHANGES TO NBPDP

Please find attached lists of **interchangeable product additions** to the New Brunswick Prescription Drug Program Formulary and additional products subject to Maximum Allowable Price (MAP).

BENEFIT ADDITIONS: effective June 2001

Claims for products that are reimbursed at Actual Acquisition Cost up to July 27, 2001 will be subject to a Maximum Allowable Price (MAP) effective July 28, 2001.

For purposes of special authorization, MAPs have been established on all interchangeable products in New Brunswick.

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

Debbie LeBlanc

Bulletin # 525

September 14, 2001

BENEFIT CHANGES TO NBPDP

Attached are lists of changes to the New Brunswick Prescription Drug Program (NBPDP) Formulary, effective September 14, 2001.

Included in this bulletin:

- **Special Authorization Additions**
- **Regular Benefit Additions**
Claims for these products will be reimbursed at actual acquisition cost (AAC). Claims for interchangeable products will be subject to a maximum allowable price (MAP) effective October 26, 2001.
- **Clinical and Benefit Status Summary**
NSAIDs and COX-2 Inhibitors in the treatment of arthritis.

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

Debbie LeBlanc
New Brunswick Prescription Drug Program

NBPDP/PHAR/PHYS

SPECIAL AUTHORIZATION (PART B) - ADDITIONS

Olanzapine Line-extension (*Zyprexa-Zydis*)

- Tablets 5mg and 10mg

- For the acute and maintenance treatment of schizophrenia and related psychotic disorders. Advice from a psychiatrist is suggested prior to starting therapy.

Prescriptions written by New Brunswick psychiatrists do not require special authorization. Subsequent refills ordered by other practitioners will not require special authorization.

Oxycodone

(*Oxy IR*)

- Tablets (immediate release)
5mg, 10mg and 20mg

- For the treatment of moderate to severe cancer-related or chronic non-malignant pain.

Oxycodone

(*OxyContin CR*)

- Tablets (controlled release)
10mg, 20mg, 40mg and 80mg

- For the treatment of moderate to severe cancer-related or chronic non-malignant pain.

Quetiapine Line-extension (*Seroquel*)

- Tablets 150mg

- For the management of the manifestations of schizophrenia. Advice from a psychiatrist is suggested prior to starting therapy.

Prescriptions written by New Brunswick psychiatrists do not require special authorization. Subsequent refills ordered by other practitioners will not require special authorization.

Salmeterol/Fluticasone

(*Advair Diskus*)

- Diskus 50/100mcg,
50/250mcg, 50/500mcg

- For patients with reversible obstructive airways disease who are
 - stabilized on an inhaled corticosteroid and a long-acting B₂ agonist, or
 - using optimal doses of inhaled corticosteroids but are still poorly controlled.

Tobramycin

(*Tobi*)

- Solution for inhalation
300mg/5mL

- For the treatment of cystic fibrosis patients who do not tolerate injectable tobramycin when used for inhalation.

SPECIAL AUTHORIZATION (PART B) – ADDITIONS

Zolmitriptan Line-extension (*Zomig Rapimelt*)

- Tablets 2.5mg

1. For the treatment of migraine headaches where patients have a definite diagnosis of migraine with or without aura based on the current Canadian guidelines.
2. The initial approval for persons not previously treated with a “triptan” will be limited to a quantity equal to three days of therapy per month at the maximum dose of two months. If therapy has been successful, special authorization could be renewed for a period of up to 12 months.

Note: Patients experiencing three or more severe migraine attacks in one month should be considered for migraine prophylaxis therapy.

NSAIDs and COX-2 Inhibitors in the treatment of arthritis

The cost of the combined usage of NSAIDs and COX-2 inhibitors under the NB Prescription Drug Program (NBPDP) has increased 88% in the past year.

COX-2 Inhibitors have been adopted as a first line therapy by many physicians. The efficacy and safety of COX-2 inhibitors compared to conventional NSAIDs may not justify the additional cost.

COX-2 inhibitors offer a theoretical advantage over NSAIDs in terms of adverse effects. But, the clinical experience has shown that COX-2 inhibitors are associated with adverse effects including gastrointestinal effects.

Place in Therapy

Acetaminophen (up to 1g QID) should be used as first line therapy for most patients with osteoarthritis, if the response is not adequate an NSAID is second line. COX-2 inhibitors are appropriate second line agents when the patient has specific risk factors that preclude NSAID use.

For most patients with rheumatoid arthritis, NSAIDs are first line therapy. In the presence of risk factors that preclude NSAID use, COX-2 inhibitors may be appropriate first line choices. COX-2 inhibitors are not DMARDs.

- **There are no appreciable differences in efficacy between NSAIDs and COX-2 Inhibitors.** There have been numerous studies that have found comparable efficacy between various NSAIDs and between NSAIDs and COX-2 agents.

- **The choice of an appropriate NSAID or COX-2 inhibitor should be based on patient risk factors, adverse effects and cost.**

Risk of Peptic Ulcer Complications

The baseline risk of hospitalization due to peptic ulcer complications in non-users of NSAIDs is about 0.2% annually. Risk increases with age (patients over 75 have a markedly higher incidence) and is higher in males than females. The use of conventional NSAIDs increases the risk of peptic ulcer complications by about 4 fold (the range is 2 to 8.5 fold depending on the drug and dosage).

- Of the conventional NSAIDs, Ibuprofen is associated with the lowest risk of ulcer complications (Ibuprofen < Diclofenac < Naproxen < Indomethacin).
- The CLASS study compared celecoxib 400mg BID to maximum doses of ibuprofen or diclofenac (with and without low dose ASA). The mean duration of treatment was 4.2 months. The incidence of GI ulcer complications (perforation, bleed, or stenosis) in non-ASA users was lower with celecoxib (0.44%) than with the NSAIDs (1.27%). In ASA users, celecoxib was still better but the difference was not statistically significant.
- The VIGOR study compared rofecoxib 50mg daily to naproxen 500mg BID for a median treatment period of 9 months. The risk of GI bleeding with rofecoxib was 62% lower than with naproxen. The rate of symptomatic ulcers was 1% with rofecoxib and 2.1% with naproxen.
- A meta-analysis of 8 trials found that rofecoxib was associated with an annual incidence of major GI complications (perforation, peptic ulcer or bleed) of 1.3% versus 1.8% with other NSAIDs (n=5,435).
- Two large trials (MELISSA and SELECT) showed meloxicam to have similar (but lower) efficacy compared to diclofenac and piroxicam. Meloxicam had slightly fewer adverse effects but may have been underdosed (7.5mg dose). Studies using meloxicam 15mg daily were associated with an incidence of GI adverse effects of 18.3–23% (similar to conventional NSAIDs).

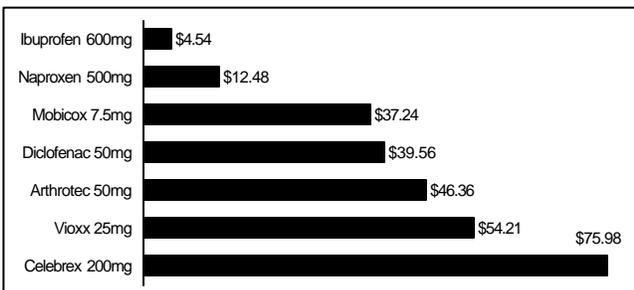

- All of the COX-2 inhibitors have studies assessing the development of endoscopic lesions compared to NSAIDs and placebo. Rofecoxib and celecoxib have shown favourable outcomes. Meloxicam 15mg was associated with endoscopic damage. These studies must be cautiously interpreted because no link between lesions and clinical disorders has been demonstrated.

Additional Adverse Effects

- COX-2 Inhibitors were initially thought to have fewer negative renal effects than NSAIDs. There has not been sufficient research in this area to draw firm conclusions. Recent literature concludes that COX-2 Inhibitors and NSAIDs pose similar risks for renal adverse effects.
- COX-2 Inhibitors do not inhibit platelet activity like NSAIDs. In the VIGOR trial, the incidence of myocardial infarction was higher (0.4%) with rofecoxib than with naproxen (0.1%). There has been considerable debate about this finding. Some argue that naproxen was cardioprotective due to platelet effects. Further research is needed.
- Celecoxib is a benzenesulfonamide derivative and should not be used in patients with sulfonamide allergies.
- Both celecoxib and rofecoxib have been associated with increased INR values when administered concurrently with warfarin. Monitoring is recommended when meloxicam and warfarin are used concurrently.
- COX-2 selectivity alone is not a good predictor of adverse effects.

Costs

The following chart shows the average cost of a prescription for the COX-2 Inhibitors and the more common NSAIDs (Based on NBPDP usage data March to June 2001: professional fees excluded).

- COX-2 Inhibitors need not be used as first line therapy in young healthy individuals.
- The cost of celecoxib increases with dose while rofecoxib 12.5mg and 25mg are the same price.

NBPDP Benefit Status

REGULAR BENEFITS:

- Arthrotec
- Diclofenac (IR & SR)
- Diflunisal
- Fenoprofen
- Floctafenine
- Flurbiprofen
- Ibuprofen
- Indomethacin
- Ketoprofen (IR & SR)
- Mefenamic acid
- Meloxicam
- Naproxen
- Piroxicam
- Sulindac
- Tiaprofenic acid
- Tolmetin

RESTRICTED BENEFITS:

- Celecoxib
- Rofecoxib

Beneficiaries < 65 years old	65 years & older
<p>Special authorization required</p> <p>For the treatment of arthritis in patients who have at least one of the following factors:</p> <ul style="list-style-type: none"> • Past history of ulcers • Concurrent warfarin therapy • Concurrent prednisone therapy • Failure with or intolerance to at least two other NSAIDs 	<p>Regular benefits</p>

SA criteria are based on the established patient risk factors for the development of serious complications with NSAIDs. Age over 65 is an additional risk factor for GI adverse effects.

BENEFIT CHANGES TO NBPDP

Please find attached lists of **interchangeable product additions** to the New Brunswick Prescription Drug Program Formulary and additional products subject to Maximum Allowable Price (MAP).

BENEFIT ADDITIONS:

Claims for products that are reimbursed at Actual Acquisition Cost up to December 20, 2001 will be subject to a Maximum Allowable Price (MAP) effective December 21, 2001.

For purposes of special authorization, MAPs have been established on all interchangeable products in New Brunswick.

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

Debbie LeBlanc

Bulletin # 535

January 25, 2002

BENEFIT CHANGES TO NBPDP

Changes to the New Brunswick Prescription Drug Program (NBPDP) Formulary effective January 25, 2002 are attached.

Regular Benefit Additions

See attached list. Claims for these products will be reimbursed at actual acquisition cost (AAC). Claims for interchangeable products will be subject to the applicable maximum allowable price (MAP).

Products Added Under Special Authorization

See attached list.

Benefit Status Changes

Ranitidine 150mg and 300mg tablets

Cimetidine is currently the only H₂ antagonist listed as a regular benefit. A review of cimetidine use in older adults has been completed. Published evidence indicates all H₂ antagonists have similar efficacy and side effect profiles. However, there is little data related to the very elderly – in whom chronic illness is more common – because they are generally not included in such studies.

Therefore, ranitidine has been added as a regular benefit for beneficiaries 65 years and older. Requests for coverage of this drug for other beneficiaries may still be made through special authorization.

Nifedipine extended release (Adalat XL®)

To offset the problem caused by supply shortages of Nifedipine PA, Adalat XL has been added as a regular benefit. As noted below, Adalat XL is more costly than Nifedipine PA.

Daily Cost		
Adalat XL	20mg daily	\$0.78
	30mg daily	\$0.96
	60mg daily	\$1.51
Nifedipine PA	10mg BID	\$0.45
	20mg BID	\$0.78

Ciprofloxacin (Cipro[®])

Benefit status changed from regular benefit to requiring special authorization effective February 1st 2002. Special authorization criteria are detailed on the following page.

The enclosed clinical and benefit status summary on fluoroquinolone antibiotics outlines the need for a reduction in ciprofloxacin consumption.

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Debbie LeBlanc
New Brunswick Prescription Drug Program

SPECIAL AUTHORIZATION (PART B) - ADDITIONS

Betahistine

(Serc)

- Tablets 8mg and 16mg

- For the symptomatic treatment of the recurrent episodes of vertigo associated with Ménière's disease.

Ciprofloxacin

(Cipro)

- Tablets 250mg, 500mg and 750mg
- Oral suspension 500mg/5mL

For the treatment of:

- Complicated urinary tract infections caused by resistant bacteria.
- Skin, soft tissue, bone and joint infections caused by Gram negative bacteria.
- Severe ("malignant") otitis externa.
- Infections with *Pseudomonas aeruginosa* (susceptible strains – resistance is now common).
- Selected patients with acute exacerbation of chronic bronchitis with risk factors

Risk factors include:

- Poor pulmonary lung function (FEV₁ below 50% predicted)
- age over 65
- comorbid medical illness (CHF, DM, CRF, chronic liver disease)
- chronic steroid use
- antibiotic use in previous three months
- malnutrition
- prolonged duration of disease
- 4 or more exacerbations per year

Prescriptions written by New Brunswick urologists or infectious disease specialists will not require special authorization.

Fosfomycin tromethamine

(Monurol)

- Sachets (single dose) 1gram

- For the treatment of acute uncomplicated urinary tract infections:
 1. In which micro-organisms are resistant to first line agents, or
 2. In patients who have an allergy or contraindication to first line agents

Pioglitazone
(Actos)

- Tablets 15mg, 30mg, 45mg

- For patients with type 2 diabetes who are not adequately controlled by diet, exercise and drug therapy. Drug therapy should include a trial of a sulfonylurea and metformin, alone and in combination, unless one of these agents is not tolerated or is contraindicated.

Note: The actual acquisition cost of once daily rosiglitazone (Avandia) is less than the cost of once daily pioglitazone (Actos). Twice daily dosing of Avandia is significantly more costly than once daily dosing of either drug.

Average cost per tablet paid by NBPDP:

Rosiglitazone (Avandia)		Pioglitazone (Actos)	
2mg	\$2.43	15mg	\$2.55
4mg	\$2.63	30mg	\$3.11
8mg	\$2.91	45mg	\$4.01

Quetiapine Line-extension
(Seroquel)

- Tablets 300mg

- For the management of the manifestations of schizophrenia. Advice from a psychiatrist is suggested prior to starting therapy.

Prescriptions written by New Brunswick psychiatrists do not require special authorization. Subsequent refills ordered by other practitioners will not require special authorization.

Ribavirin
(Rebetron)

- Capsules 200mg/interferon alfa-2b injection

Requests will be considered from internal medicine specialists for the treatment of chronic hepatitis C (HCV RNA positive)

- Initial coverage of 24 weeks will be approved for all patients. Coverage for an additional 24 weeks will be approved for patients with HCV genotype 1.
- A positive HCV RNA assay after 24 weeks of therapy is an indication to stop treatment.
- Interferon monotherapy should be reserved for patients who cannot tolerate ribavirin.

Sirolimus
(Rapamune)

- Oral solution 1mg/mL

- Rescue therapy in solid organ transplant for patients with refractory rejection on Neoral/MMF/prednisone (NMP) or tacrolimus/MMF/prednisone (TMP).
- Prophylaxis for acute rejection in solid organ transplant when a patient is unable to tolerate NMP or TMP combinations as a result of, or in anticipation of, adverse effects.

Note: These criteria are used at the Queen Elizabeth II Health Sciences Centre. Criteria used by other referring transplant centres will be considered.

Fluoroquinolone Antibiotics

The need for reductions in ciprofloxacin consumption

Antibiotic Resistance – An Urgent Problem

Antibiotic resistance is an urgent clinical and public health problem. Grim warnings of a return to the “pre-antibiotic era” where effective therapies for common infections will not be available seem more credible with each passing year. While the factors involved in the genesis and sustenance of antibiotic resistance are many and complicated, one thing is clear – as antibiotic consumption increases antibiotic resistance increases.

New Brunwickers, like other Canadians, are liberal prescribers and consumers of antibiotics. Several evaluations have revealed poor antibiotic prescription practices in Canada with estimates that as many as 50% of antibiotics are not indicated.^{1,2} These assessments are corroborated by evaluation of consumption rates in populations. In comparison to countries envied for their measured, careful approaches to antibiotic use we prescribe and consume at least twice as many antibiotics. While strides have been made in recent years to curb non-indicated antibiotic prescription especially for respiratory tract infections, there is a long way to go before we are able to describe ourselves as “measured” and “careful” with respect to antibiotic use.

Therapeutic Value of Fluoroquinolones

Fluoroquinolone antibiotics have been in widespread use for a relatively short time and have been extremely valuable and effective therapy for many conditions. In the hospital they are now an essential part of the armamentarium against many types of infections, in particular those caused by nosocomial Gram-negative bacilli.

In New Brunswick, fluoroquinolone consumption rates have increased markedly in recent years.

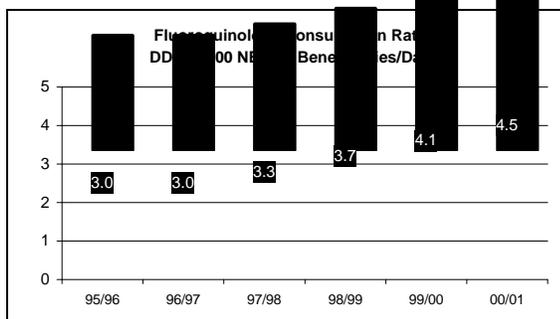

Figure 1

Figure 1 shows the consumption rate of fluoroquinolones measured in Defined Daily Dose (DDD) per 1000 NBPDP beneficiaries per day. This is the World Health Organization's system of measurement of population drug consumption. Figure 2 gives some context, demonstrating that these rates of fluoroquinolone consumption are some of the highest described in the world.

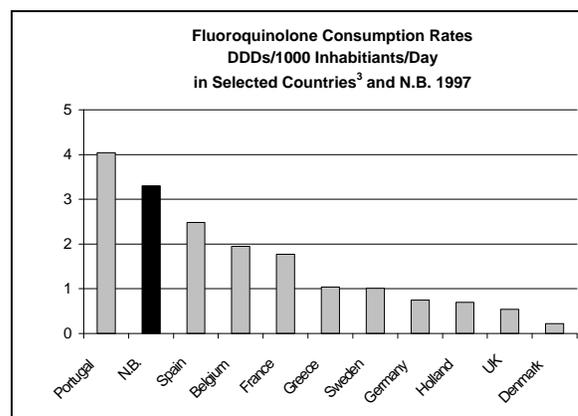

Figure 2

Ciprofloxacin has dominated the world and Canadian fluoroquinolone markets since its entry in the late 1980s. Marketed primarily for urinary tract infections but used in many other areas, it quickly became very popular with Canadian physicians. According to IMS Health there were 1,852,827 outpatient prescriptions for fluoroquinolones in 1998.

Ciprofloxacin has also been rapidly increasing as a proportion of total antibiotics consumed by NBPDP beneficiaries as can be seen in figure 3.

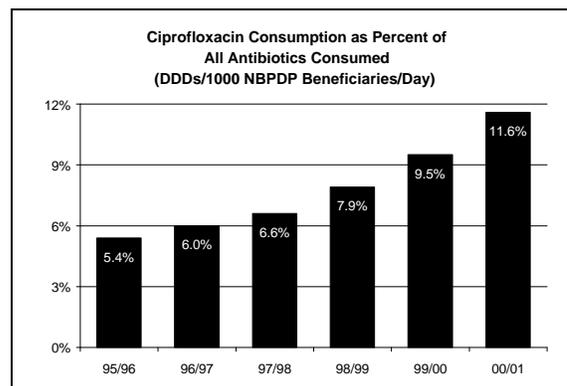

Figure 3

Consequences of Liberal Prescription - Resistance

Of course, the primary concern with high levels of fluoroquinolone consumption is the generation of fluoroquinolone resistance. Fluoroquinolone resistance levels in many pathogens have been increasing in Canada. While it is true that resistance to other classes of antibiotics is also increasing, the threat posed by fluoroquinolone resistance is arguably the most worrisome. A recent study from Ontario showing rising resistance in *S. pneumoniae* in elderly people even before the market launch of new fluoroquinolones for respiratory tract infections is cause for great concern.⁴ The value of fluoroquinolones in therapy of serious hospital acquired Gram negative infections cannot be understated and reservation of this class of agent when effective alternatives are available is a prudent course.

Potential Means of Reducing Consumption

Many initiatives aimed at reducing and improving antibiotic prescription have been undertaken in many Canadian jurisdictions in recent years. Physician and patient education, feedback, pharmacy based programs, and academic detailing have all been tried. While modest reductions in overall levels of prescription have been achieved the majority of the reduction has been in amoxicillin. This is not surprising as amoxicillin accounted for approximately one third of all antibiotics.

During this time fluoroquinolone, in particular ciprofloxacin, consumption has continued to rise. This trend of increasing consumption and the threat of resistance have lead to formulary restrictions in other jurisdictions. After a thorough review, the Ontario Drug Benefit program chose to remove ciprofloxacin from its full benefit list in February of this year. Similarly, ciprofloxacin reimbursement has been restricted in Nova Scotia. Significant decreases in consumption were seen after this policy was instituted.⁵ It appears that formulary restrictions are necessary in order to achieve meaningful reductions in prescription and consumption. Notably, there have been no reports from any Canadian jurisdictions of adverse health outcomes secondary to reduced fluoroquinolone consumption.⁶

Certainly, ciprofloxacin is an excellent and efficacious antibiotic – precisely the reason that it needs to be carefully used. The following conditions are appropriate indications:

Special Authorization Criteria for Ciprofloxacin

- Complicated urinary tract infections caused by resistant bacteria.
- Skin, soft tissue, bone and joint infections caused by **Gram negative** bacteria.
- Severe (“malignant”) otitis externa.
- Infections with *Pseudomonas aeruginosa* (susceptible strains – resistance is now common).
- Selected Patients with Acute Exacerbations of Chronic Bronchitis with Risk Factors*
 - poor pulmonary lung function (FEV1 below 50% predicted)
 - age over 65
 - comorbid medical illness (CHF, DM, CRF, chronic liver disease)
 - chronic steroid use
 - antibiotic use in previous three months
 - malnutrition
 - prolonged duration of disease
 - 4 or more exacerbations per year

Prescriptions for ciprofloxacin written by urologists or infectious disease specialists do not require special authorization.

**Several full benefit alternatives such as amoxicillin/clavulanate, cefuroxime axetil, clarithromycin and azithromycin are also appropriate therapy for acute exacerbations of chronic bronchitis with risk factors*

Bulletin # 540

May 17, 2002

BENEFIT CHANGES TO NBPDP

This update to the New Brunswick Prescription Drug Program (NBPDP) Formulary is effective May 17, 2002.

Included in this bulletin:

- **Special Authorization - New Additions**
- **Special Authorization - Revised Criteria**
- **Drugs Reviewed and Not Listed**
- **Regular Benefit Additions**
Claims for these products will be reimbursed at actual acquisition cost (AAC).

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

Debbie LeBlanc
New Brunswick Prescription Drug Program

NBPDP PHAR/PHYS

Note: If you would prefer to receive bulletins electronically rather than in hard copy, please send a message to BC.nbpdp@atl.bluecross.ca or call 1-800-670-3691.

Bulletins are also available on the NBPDP web page: <http://www.gnb.ca/0212/en/nbpdpfor.htm>.

SPECIAL AUTHORIZATION (PART B) - ADDITIONS

Imiquimod

(Aldara)

- 5% Cream

- For the treatment of external genital and external perianal/condyloma acuminata warts.

Leflunomide

(Arava)

- 5mg, 10mg and 20mg
Tablets

- For the treatment of patients with active rheumatoid arthritis who have not responded to, or have had intolerable toxicity with, an adequate trial of combination traditional DMARD (disease modifying antirheumatic drug) therapy. Combination DMARD therapy must include methotrexate unless contraindicated or not tolerated.
- Patients who are not candidates for combination DMARD therapy must have had adequate trial of at least three traditional DMARDs in sequence, one of which must have been methotrexate unless contraindicated.

Tizanidine

(Zanaflex)

- 4mg Tablets

- For the treatment of patients with spasticity caused by traumatic brain injury, multiple sclerosis, spinal cord injury or stroke in whom baclofen or diazepam are not indicated, ineffective or not tolerated.

Tryptophan Line extension

(Tryptan)

- 250mg and 750mg Tablets

- As an adjunctive therapy for drug resistant bipolar affective disorder.

SPECIAL AUTHORIZATION (PART B) – REVISED CRITERIA

Ursodiol

(Urso)

- 250mg Tablets

- For the management of cholestatic liver diseases, such as primary biliary cirrhosis.

DRUGS REVIEWED AND NOT LISTED IN THE NBPDP FORMULARY

Esomeprazole

(Nexium)

- 20mg and 40mg Tablets

- Efficacy over existing agents was not shown in the published trials.
- It is more costly than lansoprazole (Prevacid) and pantoprazole (Pantoloc)
- Requests for coverage through special authorization will not be considered.

Norethindrone Acetate /

Ethinyl Estradiol

(FemHRT)

- 1mg/5mcg Tablets

- Offers no significant therapeutic advantage and is significantly more expensive than continuous combined therapy with other oral hormone replacement products currently listed as NBPDP benefits.

August 16, 2002

BENEFIT CHANGES TO NBPDP

This update to the New Brunswick Prescription Drug Program (NBPDP) Formulary is effective August 16, 2002.

Included in this bulletin:

- **Regular Benefit Additions**
- **Special Authorization Additions**
- **Drugs Reviewed and Not Listed**

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

Debbie LeBlanc
New Brunswick Prescription Drug Program

NBPDP PHAR/PHYS

Note: If you would prefer to receive bulletins electronically rather than in hard copy, please send a message to BC_nbpdp@atl.bluecross.ca or call 1-800-332-3691.

Bulletins are also available on the NBPDP web page: <http://www.gnb.ca/0051/0212/index-e.asp>

REGULAR BENEFIT ADDITIONS

Drug/Form/Route/Strength	Brandname	DIN	Manufacturer	Plans	\$	
Fluticasone Propionate Aem Inh	50mcg	Flovent HFA	2244291	GSK	ABEFGVW	AAC
	125mcg	Flovent HFA	2244292	GSK	ABEFGVW	AAC
	250mcg	Flovent HFA	2244293	GSK	ABEFGVW	AAC

SPECIAL AUTHORIZATION (PART B) ADDITIONS

Linezolid (Zyvoxam®)

- 600mg Tablets

- For treatment of proven vancomycin-resistant *enterocci* (VRE) infections.
- For the treatment of proven methicillin-resistant *Staphylococcus aureus* (MRSA) / methicillin-resistant *Staphylococcus epidermidis* (MRSE) infections in patients who are unresponsive to, or intolerant of, intravenous vancomycin or in whom intravenous vancomycin is not appropriate.

The drug must be prescribed by, or in consultation with, an infectious disease specialist or medical microbiologist.

Bosentan (Tracleer®)

- 62.5mg and 125mg Tablets

- For treatment of pulmonary arterial hypertension (PAH) in patients with
 1. World Health Organization (WHO) functional class III and IV primary pulmonary hypertension (PPH) or
 2. Pulmonary hypertension secondary to scleroderma

Who are non responsive to first line therapy (e.g. calcium channel blockers) or have failed a vasodilator test.

Eprosartan Mesylate (Tevetan®)

- 300mg, 400mg, 600mg Tablets

- For the treatment of hypertension in patients who require an ACE Inhibitor but cannot tolerate it due to side effects.

Oxybutynin XL (Ditropan XL®)

- 5mg and 10mg Tablets

- For the treatment of urinary frequency, urgency, or urge incontinence in patients who have discontinued oxybutynin immediate release due to intolerable side effects.

DRUG REVIEWED AND NOT LISTED

Progesterone

(Prometrium®)

- 100mg Capsules

- There is no convincing evidence that clearly demonstrates that micronized progesterone is a better choice than medroxyprogesterone for hormone replacement therapy.
- The cost of Prometrium® is significantly higher than medroxyprogesterone.

Drug	Cost per unit	Cost per month
Medroxyprogesterone 2.5mg	\$0.0794	\$ 2.38 (30 day cycle)
Medroxyprogesterone 5mg	\$0.1569	\$ 1.88 (12 day cycle)
Micronized progesterone 100mg	\$0.6180	\$14.83 (2 caps daily x 12 days)

SPECIAL AUTHORIZATION (PART B) – REVISED CRITERIA

Clopidogrel (Plavix)

- 75mg tablet

The criteria has been revised to include:

- For the prevention of vascular ischemic events in patients who have been hospitalized with acute coronary syndrome (i.e. unstable angina or non-ST segment elevation myocardial infarction) in combination with ASA for a period of three months.

SPECIAL AUTHORIZATION (PART B) ADDITIONS

Estradiol-17b

(*Vivelle*)

(*Estradot*)

- 37.5mcg, 50mcg, 75mcg, 100mcg transdermal patches

- For the treatment of menopausal symptoms in women for whom oral forms of HRT are not tolerated or indicated.
-

Norethindrone acetate /

Estradiol-17b

(*Estalis*)

(*Estalis-Sequi*)

- 140/50mcg and 250/50mcg transdermal patches

- For the treatment of menopausal symptoms in women for whom oral forms of HRT are not tolerated or indicated.
-

Travoprost

(*Travatan*)

- 0.004% ophthalmic solution

- For the reduction of intraocular pressure in patients with open angle glaucoma or ocular hypertension who are intolerant of, or insufficiently responsive to, another IOP lowering drug.

If the beneficiary has had a claim for a first-line glaucoma agent (eg. betaxolol, levobunolol, timolol, etc.) in the previous 12 months, the claim for Travoprost will be automatically reimbursed.

BENEFIT CHANGES TO NBPDP

This update to the New Brunswick Prescription Drug Program (NBPDP) Formulary is effective May 26, 2003.

Included in this bulletin:

- **Special Authorization Additions**
- **Drugs Reviewed and Not Listed**

If you would prefer to receive bulletins electronically rather than in hard copy, please send a message to BC_nbpdp@atl.bluecross.ca or call 1-800-332-3691. Bulletins are also available on the NBPDP web page: www.gnb.ca/0051/0212/index-e.asp

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

Debbie LeBlanc
New Brunswick Prescription Drug Program

NBPDP PHAR/PHYS

SPECIAL AUTHORIZATION ADDITIONS

Alendronate

(*Fosamax*[®])

- 70mg Tablets

- For the treatment of osteoporosis when hormone replacement therapy (HRT) is declined, not tolerated or contraindicated.

Osteoporosis is defined as a bone mineral density (BMD) at least 2.5 standard deviations below the young adult mean (T score = -2.5) and/or the presence of osteoporotic fractures. (World Health Organization definition).

Capecitabine

(*Xeloda*[®])

- 150mg and 500mg Tablets

- For single agent treatment of patients who have metastatic colorectal cancer, with an ECOG performance status of 0-2*, when first line combination chemotherapy (5-FU/ leucovorin/irinotecan) is declined or not tolerated. Requests will be considered for patients who are chemotherapy naive or patients who have progressed 6 months after completion of adjuvant 5-FU/ leucovorin therapy.

Must be prescribed by specialists in oncology. Approvals will be granted for up to 6 months at a time.

* Patients who are asymptomatic and those who are symptomatic and in bed less than 50% of the time.

Insulin Aspart

(*NovoRapid*[®])

- 100 unit vial and penfill

- For patients with type I or II diabetes who have experienced frequent episodes of postprandial hypoglycemia; have unpredictable mealtimes; have insulin resistance; or who are using continuous subcutaneous insulin infusion.

Prescriptions written by New Brunswick endocrinologists and internists do not require special authorization. Subsequent refills ordered by other practitioners will not require special authorization.

SPECIAL AUTHORIZATION ADDITIONS

Infliximab (*Remicade*[®])

- 100mg injection in Crohn's Disease

- Must be prescribed by, or in consultation with, a gastroenterologist or physician with a specialty in gastroenterology.

Severe active Crohn's Disease

Requests will be considered for treatment of patients refractory to therapy with EACH of the following:

- 5-ASA products-minimum trial of 3 grams per day for 6 weeks AND
- Glucocorticosteroids - including steroid dependent disease AND
- Immunosuppressive therapy - azathioprine, 6-mercaptopurine or methotrexate for minimum 3 months*

Initial approval will be for a single 5 mg/kg dose. A second infusion may be considered for patients not responding to the first infusion, or in patients initially responsive but worsening before maintenance therapy is effective.

Fistulizing Crohn's Disease

Requests will be considered for patients with actively draining perianal or enterocutaneous fistula(e) that have occurred or persisted despite:

- Antibiotic therapy with metronidazole +/- ciprofloxacin for a minimum of 3 weeks AND
- Immunosuppressive therapy with azathioprine, 6-mercaptopurine or methotrexate for minimum of 6 weeks*

Initial approval will be for three doses of 5mg/kg dose at 0, 2 and 6 weeks.

* Patients who are very ill and not candidates for surgery may qualify for infliximab therapy without a trial of AZA, 6-MP or MTX as they may require a more rapid onset of response. Contraindications or serious adverse reactions limiting the use of any of the above therapies should be noted on the request for coverage.

SPECIAL AUTHORIZATION ADDITIONS

Infliximab

(*Remicade*[®])

- 100mg injection in Rheumatoid Arthritis

Etanercept

(*Enbrel*[®])

- 25mg injection in Rheumatoid Arthritis

Effective April 1, 2003

- Must be prescribed by a rheumatologist.

For the treatment of patients with active rheumatoid arthritis who:

- Have not responded to, or have had intolerable side-effects with, an adequate trial of combination traditional DMARD (disease modifying antirheumatic drug) therapy. Combination DMARD therapy must include methotrexate unless contraindicated or not tolerated, OR
- Are not candidates for combination DMARD therapy must have had adequate trial of at least three traditional DMARDs in sequence, one of which must have been methotrexate unless contraindicated
AND
- Have had an adequate trial of leflunomide unless it is contraindicated or not tolerated.

Rabeprazole

(*Pariet*[®])

- 10mg Tablets

- Same criteria as other Proton Pump Inhibitors (PPIs).
For the treatment of Gastro-esophageal Reflux Disease (GERD) Zollinger-Ellison Syndrome, Peptic Ulcer Disease (PUD) and as part of an *H. pylori* eradication regimen.

NB gastroenterologists do not require special authorization.

Details of criteria are contained in the NBPDP Formulary
www.gnb.ca/0051/0212/index-e.asp

Tacrolimus

(*Protopic*[®])

- 0.03% Ointment

- For children over 2 years of age with refractory atopic dermatitis.
Approvals will be given for up to twelve months at a time.
-

DRUGS REVIEWED AND NOT LISTED

Tacrolimus

(Protopic®)

- 0.1% Ointment

- A variety of topical corticosteroids are listed as NBPDP benefits for the treatment of atopic dermatitis in adults.

Calcipotriol/Betamethasone

(Dovobet®)

- 50mcg/g / 0.5mg/g Ointment

- Both single entity products contained in Dovobet® are listed as NBPDP benefits. Dovobet® is more expensive than the combined cost of the individual components.

- Requests for coverage through special authorization will not be considered.

Cost comparison:

Product	Wholesale Cost (60g)
Calcipotriol (Dovonex®)	\$45.41
Betamethasone dipropionate (Diprosone®)	\$14.02
Total	\$59.43
 Dovobet®	 \$104.16

Bulletin #575

September 3, 2003

DRUGS FOR THE TREATMENT OF ALZHEIMER'S DISEASE

Effective September 1, 2003, drugs used to treat Alzheimer's disease (AD) have been added as restricted benefits for beneficiaries of the New Brunswick Prescription Drug Program (NBPDP). The three cholinesterase inhibitors (ChEIs) currently on the market, Aricept[®] (donepezil), Exelon[®] (rivastigmine) and Reminyl[®] (galantamine), have been added to the NBPDP Formulary under special authorization.

The recommendation to add the ChEIs as restricted benefits was made by the Atlantic Expert Advisory Committee. The Committee also recommended that the drugs be part of a comprehensive strategy around the management of AD and that the strategy include both an education and evaluation component.

The coverage criteria for the ChEIs are included with this Bulletin. The objective of the criteria is to provide ChEIs to patients in the mild to moderate stages of AD, when they are most likely to benefit from them; and at the same time, prevent the long-term use of these drugs when they no longer make a difference in the life of a patient with AD.

Education Component

The Office of Continuing Medical Education at Dalhousie University is currently developing an educational program on the diagnosis and management of AD. This program will specifically respond to the learning needs identified in the May 2002 "Physician Needs Assessment in Alzheimer Disease and Other Dementias"¹. The education program will be case-based and will include the following:

- Identifying patients with dementia;

- Determining the type and severity of dementia;
- Assessing mental status with the Mini-Mental State Examination (MMSE);
- Assessing function with the Functional Assessment of Stage (FAST);
- Identifying target symptoms to determine response to treatment;
- Prescribing ChEIs; and
- Completing special authorization forms to ensure patients in the mild to moderate stages receive coverage.

The educational workshops, which will be approximately three hours in length, will be available to physicians by January 2004.

Criteria for Coverage of ChEIs

To be eligible for coverage, patients must meet specific clinical criteria. The criteria include:

- A MMSE² score within a specified range;
- A FAST³ score within a specified range; and
- Identifying three symptoms that will be managed with the ChEI.

The MMSE and FAST are standard measures used to assess and stage AD. These measures, along with others, have been used in clinical trials to measure

treatment effect. Unfortunately, these measures do not adequately describe effects in terms of clinical meaningfulness and relevance to the everyday lives of patients and caregivers. A method that has been used to evaluate clinically meaningful changes following the initiation of a ChEI involves identifying the problematic symptoms (or target symptoms) associated with AD in that patient and monitoring whether these symptoms improve, deteriorate or stabilize over time. Target symptoms generally fit into one of four domains:

- Cognition
- Function
- Behaviour
- Social/leisure

When target symptoms are identified, they must be observable and measurable so they can be monitored throughout the course of therapy. An example of a target symptom in the domain of behaviour is: *“Patient has become insensitive towards others and is disinhibited.”* An example of a target symptom in the domain of social/leisure is: *“Patient has lost interest in playing cards with her friends.”*

Request Forms

Specific forms have been developed to apply for coverage of ChEIs. Two request forms are attached and available on the NBPDP website www.gnb.ca/0051/0212/index-e.asp

Form # 1 is used to initiate therapy for a ChEI-naive patient. It is also used to continue therapy for a patient already taking a ChEI on September 1, 2003.

Form # 2 is used to initiate therapy of a second ChEI for a patient who has previously taken no more than one other ChEI. Note that a patient must discontinue the first ChEI before a second ChEI will be approved.

Forms are to be completed by physicians and faxed to the NBPDP Special Authorization Unit as per the usual process. Initial requests that meet the coverage criteria will be approved for a 90-day period. Well before the end of the initial 90-day period, physicians will be sent a form to complete to continue coverage for a second 90-day period. This form will provide physicians with the target symptoms initially established and will ask physicians to determine whether the symptoms have improved, stabilized or deteriorated. Patients who have stabilized or improved in at least one target symptom will be approved for a second 90 day period.

Thereafter, physicians will be sent a form to complete to continue coverage for six-month periods. The criteria to continue coverage for six-month periods are provided with this Bulletin. Note that the maximum period for which coverage will be provided is six months.

Due to the number of requests expected at this time, a delay in the initial approval of these drugs should be anticipated.

If you have any questions, please contact our office at 1-800-332-3691.

¹ This needs assessment was conducted by the Office of Continuing Medical Education at Dalhousie University for the Action Committee on Physician Diagnosis and Management of Alzheimer Disease of the Alzheimer Society of Nova Scotia.

² The MMSE refers to the MMSE with standard instruction from the Canadian Study on Health and Aging which is described in: K. Rockwood, C. MacKnight. *Understanding Dementia: A Primer of Diagnosis and Management*. Halifax: Pottersfield Press. 2001 ISBN: 1-895900-38-8.

³ The FAST refers to the FAST © 1984 by Barry Reisburg, M.D. which can be accessed at <http://www.geriatric-resources.com/html/fast.html>

SPECIAL AUTHORIZATION ADDITIONS

Drugs for the Treatment of Alzheimer's Disease

Donepezil
(*Aricept*[®])
5mg and 10mg Tablets

Galantamine
(*Reminyl*[®])
4mg, 8mg, 12mg Tablets

Rivastigmine
(*Exelon*[®])
1.5mg, 3mg, 4.5mg, 6mg
Capsules
2mg/mL Oral Liquid

1. To initiate therapy for a cholinesterase inhibitor (ChEI)-naive patient or to continue therapy for a patient already taking a ChEI on September 1, 2003:

Requests must be submitted on the appropriate NBPDP special authorization form. Patients who meet all of the following reimbursement criteria will be approved for an initial 90 days of therapy:

- a diagnosis of probable Alzheimer's disease or possible Alzheimer's disease with vascular component or Lewy bodies;
- a MMSE score of 10 to 30;
- a FAST score of 4 to 5; and
- target symptoms established in each of three domains (chosen from the four domains of cognition, function, behaviour and social/leisure).

To continue therapy for a second 90-day period:

Requests must be submitted on the appropriate NBPDP special authorization form. Patients who meet the following monitoring criteria will be approved for a second 90 days of therapy:

- stabilization or improvement in at least one target symptom.

To continue therapy for 6-month periods:

Requests must be submitted on the appropriate NBPDP special authorization form. Patients who meet the following monitoring criteria will be approved for 6 month periods of therapy:

- a MMSE score of 10 to 30 (Note: A MMSE score must be provided 6 months after starting a ChEI and then only annually thereafter.);
 - a FAST score of 4 to 5 (Note: A FAST score must be provided 6 months after starting a ChEI and then only annually thereafter.); and
 - stabilization or improvement in at least one target symptom.
-

SPECIAL AUTHORIZATION ADDITIONS

Drugs for the Treatment of Alzheimer's Disease - Continued

Donepezil

(*Aricept*[®])

5mg and 10mg Tablets

Galantamine

(*Reminyl*[®])

4mg, 8mg, 12mg Tablets

Rivastigmine

(*Exelon*[®])

1.5mg, 3mg, 4.5mg, 6mg

Capsules

2mg/mL Oral Liquid

2. To initiate therapy for a patient who has previously taken no more than one other ChEI:

Requests must be submitted on the appropriate NBPDP special authorization form.

Patients will be approved for an initial 90 days of therapy with a second ChEI when the following information is provided:

- the reason for discontinuing the first ChEI; and
- any changes in target symptoms.

To continue therapy for a second 90-day period:

Requests must be submitted on the appropriate NBPDP special authorization form. Patients who meet the following monitoring criteria will be approved for a second 90 days of therapy:

3. stabilization or improvement in at least one target symptom.

To continue therapy for 6-month periods:

Requests must be submitted on the appropriate NBPDP special authorization form. Patients who meet the following monitoring criteria will be approved for 6 month periods of therapy:

- a MMSE score of 10 to 30 (Note: A MMSE score must be provided 6 months after starting a ChEI and then only annually thereafter.);
 - a FAST score of 4 to 5 (Note: A FAST score must be provided 6 months after starting a ChEI and then only annually thereafter.); and
 - stabilization or improvement in at least one target symptom.

Bulletin #578

October 21, 2003

BENEFIT CHANGES TO NBPDP

This update to the New Brunswick Prescription Drug Program (NBPDP) Formulary is effective October 21, 2003.

Included in this bulletin:

- **Regular Benefit Additions**
Claims for these products will be reimbursed at actual acquisition cost (AAC).
- **Special Authorization Additions**
- **Drugs Reviewed and Not Listed**

If you would prefer to receive bulletins electronically rather than in hard copy, please send a message to BC_nbpd@atl.bluecross.ca or call 1-800-332-3691. Bulletins are also available on the NBPDP web page: www.gnb.ca/0051/0212/index-e.asp

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

Debbie LeBlanc
New Brunswick Prescription Drug Program

REGULAR BENEFIT ADDITIONS

Drug/Form/Route/Strength	Brandname	DIN	Manufacturer	Plans	\$		
Clarithromycin Tab	Orl	500mg	Biaxin XL	2244756	ABB	ABEFGVW	AAC
Pramipexole Tab	Orl	0.5mg	Mirapex	2241594	BOE	AEFVW	AAC
Ropinirole Tab	Orl	0.25mg	ReQuip	2232565	GSK	AEFV	AAC
		1mg	ReQuip	2232567	GSK	AEFV	AAC
		2mg	ReQuip	2232568	GSK	AEFV	AAC
		5mg	ReQuip	2232569	GSK	AEFV	AAC

SPECIAL AUTHORIZATION ADDITIONS

Capecitabine

(*Xeloda*[®])

150mg and 500mg tablets

In addition to the current criteria, requests from specialists in hematology/oncology will be considered for:

- Treatment of patients with metastatic breast cancer who have failed or are intolerant to taxane therapy and have an ECOG performance status of 0-2*.

* Patients who are asymptomatic and those who are symptomatic and in bed less than 50% of the time.

Darbepoetin

(*Aranesp*[®])

10, 20, 30, 40, 50, 60, 80, 100, 150mcg prefilled syringes

- Treatment of anemia associated with chronic renal failure. Note: patients on dialysis (end-stage renal disease) receive darbepoetin through the dialysis units.

Entacapone

(*Comtan*[®])

200mg tablets

- Treatment of Parkinson's disease as adjunctive therapy in patients not well controlled and are experiencing significant "wearing off" symptoms despite optimal therapy with levodopa/decarboxylase or levodopa/benserazide.

SPECIAL AUTHORIZATION ADDITIONS

Imatinib
(*Gleevec*[®])
100mg capsules

Requests from specialists in hematology/oncology will be considered for:

1. Patients who have documented evidence of Philadelphia chromosome positive (Ph+) chronic myelogenous leukemia (CML), with an ECOG performance status of 0-2 who are:
 - in blast crisis, or
 - in accelerated phase, or
 - in chronic phase after failure of interferon-alpha therapy

Reassessment is required every 6 months.

2. Patients with c-Kit positive (CD117), metastatic or locally advanced, inoperable gastrointestinal stromal tumours (GIST), who have an ECOG performance status of 0-2*.

*Patients who are asymptomatic and those who are symptomatic and in bed less than 50% of the time.

LINE EXTENSIONS

Olanzapine
(*Zyprexa*[®])
15mg tablets

- For the acute and maintenance treatment of schizophrenia and related psychotic disorders. Advice from a psychiatrist is suggested prior to starting therapy.

Prescriptions written by New Brunswick psychiatrists do not require special authorization. Subsequent refills ordered by other practitioners will not require special authorization.

Salmeterol/Fluticasone
(*Advair*[®])
25/125 mcg & 25/250mcg
metered dose inhaler
(HFA)

- For patients with reversible obstructive airways disease who are:
- Stabilized on an inhaled corticosteroid and a long-acting B₂ agonist, or
 - Using optimal doses of inhaled corticosteroids but are still poorly controlled.

DRUGS REVIEWED AND NOT LISTED

Nateglinide

(*Starlix*[®])

60mg, 120mg and 180mg
tablets

- Offers no significant therapeutic advantage over currently available therapy
- Requests for coverage through special authorization will not be considered

Desloratidine

(*Aerius*[®])

5mg tablet

- No evidence of therapeutic advantage over currently available agents
 - Higher cost compared to other non-sedating antihistamines
 - Antihistamines are excluded as NBPDP benefits for all Plans except Plan G (children in care)
-

BENEFIT CHANGES TO NBPDP

This update to the New Brunswick Prescription Drug Program (NBPDP) Formulary is effective January 30, 2004.

Included in this bulletin:

- **Regular Benefit Additions**
Claims for these products will be reimbursed at actual acquisition cost (AAC).
- **Special Authorization Revised Criteria**
- **Special Authorization Additions**
- **Drugs Reviewed and Not Listed**
- **Special Authorization Requests for Alzheimer's Disease Drugs**
Please note that requests for cholinesterase inhibitors must be submitted using the appropriate NBPDP form. Form 1 is used the first time reimbursement is requested. Form 2 is used to change from one cholinesterase inhibitor to another. These forms are available on the NBPDP webpage or by calling our office.

Included with this bulletin is a guide to using the Functional Assessment Staging Tool (FAST) and examples that may be helpful in identifying Target Symptoms.

If you would prefer to receive bulletins electronically rather than in hard copy, please send a message to BC_nbpdp@atl.bluecross.ca or call 1-800-332-3691. Bulletins are also available on the NBPDP web page: www.gnb.ca/0051/0212/index-e.asp

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

Debbie LeBlanc
New Brunswick Prescription Drug Program

REGULAR BENEFIT ADDITIONS

Drug/Form/Route/Strength	Brandname	DIN	Manufacturer	Plans	\$
Metoprolol Tartrate Tab Orl 25mg	Apo-Metoprolol	2246010	APX	AEFGVW	AAC
Estradiol Tab Vag 25mcg	Vagifem	2241332	NNO	AEFGV	AAC
Moxifloxacin Tab Orl 400mg	Avelox	2242965	BAY	V	AAC

SPECIAL AUTHORIZATION – REVISED CRITERIA

Formoterol

(Foradil®)

12mcg inhalation capsules

The criteria have been revised to include:

(Oxeze®)

12mcg inhalation turbuhaler

Prescriptions written by certified New Brunswick respirologists do not require special authorization. Subsequent refills ordered by other practitioners will not require special authorization.

Salmeterol

(Serevent®)

25mcg MDI

50mcg diskus

SPECIAL AUTHORIZATION ADDITIONS

Clozapine

(Gen-Clozapine®)

25mg and 100mg tablets

For the management of treatment-resistant schizophrenia. Prescriptions written by NB psychiatrists do not require special authorization. Please see current clozapine listing for complete criteria.

A maximum allowable price (MAP) will not be applied to clozapine at this time.

SPECIAL AUTHORIZATION ADDITIONS

Desmopressin

(*DDAVP*[®])

0.1mg and 0.2mg tablets

For the management of diabetes insipidus.

Moxifloxacin

(*Avelox*[®])

400mg tablets

For the treatment of:

- Community acquired pneumonia (CAP) with co-morbid illness, failure of first-line therapy or as step-down therapy after hospital discharge.
- Acute exacerbations of chronic bronchitis (AECB) with risk factors¹ or as step-down therapy after hospital discharge.
- Pneumonia acquired in a long term care facility (regular benefit for Plan V).

¹ Risk factors include FEV_i <50% of predicted; age >65; co-morbid illness such as congestive heart failure, diabetes, chronic renal failure, chronic liver disease; chronic corticosteroid use; malnutrition; prolonged duration of disease; or 4 or more exacerbations per year.

Prescriptions written by New Brunswick infectious disease specialists, medical microbiologists or respirologists will not require special authorization.

Sevelamer

(*Renage*[®])

400mg and 800mg tablets

- Treatment of severe renal failure, where a calcium salt is contraindicated or not tolerated or when a phosphate binder is needed in association with a calcium salt, where a calcium salt alone does not produce optimal control of the hyperphosphatemia.
 - The prescription must be initiated by a nephrologist.
-

Delta-9-**Tetrahydrocannabinol**

(*Marinol*[®])

2.5mg, 5mg and 10mg capsules

- Treatment of severe nausea and vomiting associated with cancer chemotherapy in patients who have not been well controlled by standard antiemetic therapy
 - Treatment of anorexia with weight loss associated with acquired immune deficiency syndrome (AIDS).
-

DRUGS REVIEWED AND NOT LISTED

The reviews of the following products found that they did not offer a therapeutic and/or cost advantage over existing therapies. Requests for coverage through special authorization will not be considered.

Alfuzosin	<i>(Xatral[®])</i>	10mg tablets
Doxercalciferol	<i>(Hectorol[®])</i>	2.5mcg capsule
Fusidic Acid	<i>(Fucithalmic[®])</i>	1% viscous eye drops
Ketotifen fumarate	<i>(Zaditor[®])</i>	0.25% ophthalmic solution

Using the Functional Assessment Staging Tool (FAST)

- Only patients with a FAST score of **4 or 5** are eligible for NB Prescription Drug Program (NBPDP) coverage for cholinesterase inhibitors.
- Patients with a FAST score of **1, 2, 3, 6 or 7** are **not** eligible for NBPDP coverage for cholinesterase inhibitors.
- It is sometimes difficult to decide if a patient has a FAST score of **4, 5 or 6**.
 - The following table provides some general guidance for deciding if the FAST score is 4, 5 or 6 based on **instrumental** and **basic** activities of daily living.

Instrumental activities of daily living (IADL)

- Include
 - managing money and medications
 - shopping
 - cooking
 - driving
 - housekeeping
 - using a telephone
- Impairment of these activities requires some community or family support, but often the patient can be left alone for much of the day.

Basic activities of daily living (ADL)

- Include
 - feeding
 - toileting
 - dressing
 - washing
 - mobility
- Impairment of these activities leads to need for frequent personal nursing care.

FAST Stage	IADL	ADL
	managing money and meds, shopping, cooking, driving, housekeeping, using phone	feeding, toileting, dressing washing, mobility
4	Need assistance	Independent
5	Need assistance or dependent	Need cueing or minimal assistance
6	Cannot do	Needs complete hands on assistance

Target Symptoms for Monitoring Alzheimer's Disease Patients

- The following examples will help you define specific activities within different domains (**cognition, function, behaviour, social/leisure**).
- Ideally, target symptoms will be from three of four domains. However, it is best to choose target symptoms that are clinically important to the patient and caregiver.

Cognition: The patient may have difficulty:

- Following a conversation with others
- Following a recipe or instructions
- Working the remote control (men)
- Dialing a phone (familiar number)
- Remembering children and or grandchildren's names
- Remembering important events of past week

(The above examples must be meaningful and specific to that person. i.e. following a recipe is not meaningful if they did not cook the meals in the past)

Function: The patient may have difficulty:

- Doing own banking (machine or otherwise)
- Preparing a meal
- Grooming and dressing independently
- Bathing/showering independently
- Doing light house work independently
(**OR** any Instrumental Activities of Daily Living)

Behaviour: The patient may:

- Be irritable more than once daily
- Have difficulty participating in daily conversations
- Have delusions or hallucinations
- Have fluctuations in memory impairment

Leisure/Social: The patient may have difficulty:

- Participating in past hobbies (e.g., card games, woodworking)
- Participating in social gatherings (e.g., hiding in a corner)
- Reading and enjoying a novel
- Enjoying gardening, watching T.V.
- Walking independently or taking dog for walk by self

Bulletin # 590

Bulletin #593

April 30, 2004

BENEFIT CHANGES TO NBPDP

This update to the New Brunswick Prescription Drug Program (NBPDP) Formulary is effective April 30, 2004.

Included in this bulletin:

- **Regular Benefit Additions**
Claims for these products will be reimbursed at actual acquisition cost (AAC).
- **Special Authorization Additions**
- **Drugs Reviewed and Not Listed**

If you would prefer to receive bulletins electronically rather than in hard copy, please send a message to BC_nbpdp@atl.bluecross.ca or call 1-800-332-3691. Bulletins are also available on the NBPDP web page: www.gnb.ca/0051/0212/index-e.asp

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

Debbie LeBlanc
New Brunswick Prescription Drug Program

REGULAR BENEFIT ADDITIONS

Drug/Form/Route/Strength	Brandname	DIN	Manufacturer	Plans	\$
Fluoxetine Hydrochloride Cap Orl 40mg	FXT40[®]	2245283	ORX	AEVW	AAC
Atenolol Tab Orl 25mg	pms-Atenolol[®]	2246581	PMS	AEFGVW	AAC

SPECIAL AUTHORIZATION ADDITIONS

Budesonide/Formoterol (*Symbicort[®]*)

100mcg/6mcg and 200mcg/6mcg
metered dose inhaler

For patients with reversible obstructive airways disease who are

- Stabilized on an inhaled corticosteroid and a long-acting beta₂-agonist, or
- Using optimal doses of inhaled corticosteroids but are still poorly controlled

Fentanyl

(*Duragesic[®]*)

25mcg/hr, 50mcg/hr, 75mcg/hr
and 100mcg/hr
transdermal system

For the management of malignant or chronic non-malignant pain

- When oral drug administration is not possible or practical
- In patients who are unresponsive or intolerant to at least two long acting oral sustained release products such as morphine and hydromorphone, despite appropriate dose titration and adjunctive therapy including laxatives and antiemetics.

Latanoprost/Timolol

(*Xalacom[®]*)

50mcg/5mg/mL
ophthalmic solution

For the reduction of intraocular pressure in patients with open-angle glaucoma or ocular hypertension who are insufficiently responsive to monotherapy with a beta-blocker and a prostaglandin analog, and when the use of the combination drug is considered appropriate.

Valganciclovir

(*Valcyte[®]*)

450mg tablets

For the treatment of cytomegalovirus (CMV) retinitis in HIV positive patients on the advice of an infectious disease specialist.

Peginterferon alfa-2b+Ribavirin
(*Pegatron*[®])
injection + 200mg capsules

Requests will be considered from internal medicine specialists for the treatment of chronic hepatitis C (HCV RNA positive)

- Initial coverage of 24 weeks will be approved for all patients. Coverage for an additional 24 weeks will be approved for patients with HCV genotype 1.
- A positive HCV RNA assay after 24 weeks of therapy is an indication to stop treatment.
- Interferon monotherapy should be reserved for patients who cannot tolerate ribavirin.

Risedronate
(*Actonel*[®])
35mg once-a-week tablets

For the treatment of osteoporosis when hormone replacement therapy (HRT) is declined, not tolerated or contraindicated.

Osteoporosis is defined as a bone mineral density (BMD) at least 2.5 standard deviations below the young adult mean (T score = -2.5) and/or the presence of osteoporotic fractures. (World Health Organization definition)

Sirolimus
(*Rapamune*[®])
1mg tablets

- Rescue therapy in solid organ transplant for patients with refractory rejection on Neoral/MMF/prednisone (NMP) or tacrolimus/MMF/prednisone (TMP).
- Prophylaxis for acute rejection in solid organ transplant when a patient is unable to tolerate NMP or TMP combinations as a result of, or in anticipation of, adverse effects.

Note: These criteria are used at the Queen Elizabeth II Health Sciences Centre. Criteria used by other referring transplant centres will be considered.

Somatropin
(*Humatrope*[®])
1mg, 6mg, 12mg and 24mg
injection
(*Saizen*[®])
3.33mg and 5mg injection

- For the treatment of short stature associated with Turner's Syndrome in patients whose epiphyses are not closed
 - Must be prescribed by, or in consultation with, an endocrinologist
-

DRUGS REVIEWED AND NOT LISTED

The reviews of the following products found that they did not offer a therapeutic and/or cost advantage over existing therapies. Requests for coverage through special authorization will not be considered.

Anakinra	<i>(Kineret[®])</i>	100mg/0.67mL injection
Clindamycin / benzoyl peroxide	<i>(Clindoxyl[®])</i>	1% / 5% topical gel
Glimepiride	<i>(Amaryl[®])</i>	1mg, 2mg, 4mg tablets
Tegaserod	<i>(Zelnorm[®])</i>	6mg tablets

Bulletin # 599

SPECIAL AUTHORIZATION – ADDITIONS

Omeprazole
(*Apo-Omeprazole*[®])
20mg capsules

Same criteria as other Proton Pump Inhibitors (PPIs)
(except not indicated for eradication of *H. pylori*.)

NB gastroenterologists do not require special authorization.

Criteria details are contained in the NBPDP Formulary
www.gnb.ca/0051/0212/index-e.asp

Tiotropium
(*Spiriva*[®])
18mcg capsule for inhalation

For the treatment of moderate to severe chronic obstructive pulmonary disease (COPD) in patients who continue to be symptomatic despite an adequate trial (2-4 months) with ipratropium at a dose of 4 puffs four times daily.

Canadian Thoracic Society COPD Classification:

- Moderate: Shortness of breath from COPD causing the patient to stop after walking about 100 meters (or after a few minutes) on the level or FEV₁ 40 to 59% predicted, FEV₁/FVC < 0.7
- Severe: Shortness of breath from COPD resulting in the patient being too breathless to leave the house, breathless after undressing, or the presence of chronic respiratory failure or clinical signs of right heart failure or FEV₁ < 40% predicted, FEV₁/FVC < 0.7

SPECIAL AUTHORIZATION – REVISED CRITERIA

Alendronate
(*Fosamax*[®])
10mg and 70mg tablets

The criteria have been revised to include:

Risedronate
(*Actonel*[®])
5mg and 35mg tablets

- For the prevention of corticosteroid induced osteoporosis in patients expected to receive oral corticosteroid therapy for 3 months or more.

DRUGS REVIEWED AND NOT LISTED

The following products are **not eligible** for coverage **for the prevention of primary osteoporosis** (defined as patients with a T-score above -2.5 without a pre-existing fragility fracture): Alendronate (Fosamax[®]), Calcitonin (Miacalcin[®], Apo-Calcitonin[®]), Raloxifene (Evista[®]) and Risedronate (Actonel[®]).

The reviews of the following products found that they did not offer a significant therapeutic and/or cost advantage over existing therapies. Requests for coverage through special authorization will not be considered.

Alendronate	(Fosamax [®])	5mg tablets
Testosterone	(Androderm [®])	12.2mg & 24.3mg transdermal delivery
	(AndroGel [®])	1% gel
Trandolapril/Verapamil SR	(Tarka [®])	1/240mg, 2/180mg, 2/240mg, 4/240mg tablets

SPECIAL AUTHORIZATION ADDITIONS

Anastrozole
(*Arimidex[®]*)
1mg tablets

Exemestane
(*Aromasin[®]*)
25mg tablets

Letrozole
(*Femara[®]*)
2.5mg tablets

For the treatment of advanced/metastatic breast cancer in post menopausal women.

SPECIAL AUTHORIZATION ADDITIONS

Riluzole
(*Rilutek*[®])
50mg tablets

For the treatment of amyotrophic lateral sclerosis (ALS) or Lou Gehrig's Disease, when initiated by a neurologist with expertise in the management of ALS and authorized to prescribe riluzole (is a member of the Canadian ALS Consortium), in patients who have:

- A probable or definite diagnosis of ALS as defined by the World Federation of Neurology criteria.
 - ALS symptoms for less than five years.
 - FVC > 60 % predicted.
 - No tracheostomy for invasive ventilation
-
- Requests will be approved for a maximum of six months coverage.
 - Coverage cannot be renewed once the patient has a tracheostomy for the purpose of invasive ventilation or has a FVC of < 60% predicted.

LINE EXTENSIONS

Enoxaparin Sodium
(*Lovenox HP*[®])
150mg/mL and 120mg/0.8mL
Prefilled syringes

Plans AEF+18V for the initial treatment of deep vein thrombosis (DVT). One prescription claim annually will be automatically reimbursed, up to the average amount required for one DVT treatment (approximately 10 days of therapy). If additional medication is required subsequent to the initial prescription, a request should be made through special authorization.

Ursodiol
(*Urso DS*[®])
500mg tablets

For the management of cholestatic liver diseases, such as primary biliary cirrhosis.

Valsartan
(*Diovan*[®])
80mg and 160mg tablets

For the treatment of hypertension in patients who require an ACE inhibitor but cannot tolerate it due to side effects.

DRUGS REVIEWED AND NOT LISTED

The reviews of the following products found that they did not offer a therapeutic and/or cost advantage over existing therapies. Requests for coverage through special authorization will not be considered.

Conjugated estrogens/ Medroxyprogesterone acetate	<i>(Premplus®)</i>	0.625mg/5mg tablets
Fondaparinux	<i>(Arixtra®)</i>	2.5mg/0.5mL prefilled syringes
Rosiglitazone/Metformin	<i>(Avandamet®)</i>	1/500mg, 2/500mg, 4/500mg tablets
Valdecoxib	<i>(Bextra®)</i>	10mg, 20mg tablets
Zoledronic Acid	<i>(Zometa®)</i>	4mg/vial injection

BENEFIT CHANGES TO NBPDP

VIOXX[®] (rofecoxib) DELISTED

On September 30, 2004, Merck & Co. announced a voluntary worldwide withdrawal of Vioxx[®] (rofecoxib). The Company's decision is based on new, three-year data from a prospective, randomized, placebo-controlled clinical trial, the APPROVe (Adenomatous Polyp Prevention on VIOXX[®]) trial that indicates an increased risk of cardiovascular events such as heart attacks and strokes.

More information is available on the Merck Canada website: www.merckfrosst.ca or by calling 1-800-567-2594. Patients taking Vioxx[®] are being advised to consult their physicians about discontinuing use of the product and treatment alternatives.

Vioxx[®] has been delisted as a New Brunswick Prescription Drug Program (NBPDP) benefit. Other non-steroidal anti-inflammatory drugs (NSAIDs) listed as benefits include the following:

REGULAR BENEFITS

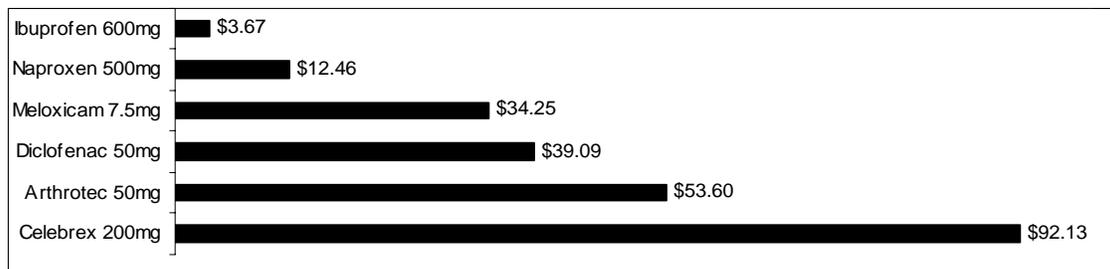

Arthrotec	Ketoprofen (IR & SR)
Diclofenac (IR & SR)	Mefenamic acid
Diflunisal	Meloxicam
Floctafenine	Naproxen
Flurbiprofen	Piroxicam
Ibuprofen	Sulindac
Indomethacin	Tiaprofenic acid

RESTRICTED BENEFIT

Celecoxib	
< 65 years old	Special authorization required
65 years & older	Regular benefit

COMPARATIVE COSTS

The following chart shows the average cost of a prescription for commonly prescribed NSAIDs (Based on NBPDP usage data April to June 2004; professional fees excluded).

Bulletin #609

November 29, 2004

BENEFIT CHANGES TO NBPDP

This update to the New Brunswick Prescription Drug Program (NBPDP) Formulary is effective November 29, 2004.

Included in this bulletin:

- **Regular Benefit Additions**
- **Special Authorization Additions**
- **Drugs Reviewed and Not Listed**

If you would prefer to receive bulletins electronically rather than in hard copy, please send a message to BC_nbpdp@atl.bluecross.ca or call 1-800-332-3691. Bulletins are also available on the NBPDP web page: www.gnb.ca/0051/0212/index-e.asp

If you have any questions or concerns, please contact our office at 1-800-332-3691.

Yours truly,

Debbie LeBlanc

SPECIAL AUTHORIZATION ADDITIONS

Bimatoprost
(*Lumigan[®]*)
0.03% ophthalmic solution

For the reduction of intraocular pressure in patients with open angle glaucoma or ocular hypertension who are intolerant of, or insufficiently responsive to, another intraocular pressure (IOP) lowering drug.

If the beneficiary has had a claim for a first-line glaucoma agent (eg. betaxolol, levobunolol, timolol, etc.) in the previous 12 months, the claim for bimatoprost will be automatically reimbursed.

SPECIAL AUTHORIZATION ADDITIONS

Ezetimibe
(*Ezetrol*[®])
10mg tablets

For the treatment of hypercholesterolemia

- As adjunctive therapy with a statin, in patients who have not reached treatment goals on maximum tolerated statin therapy alone, or
- As monotherapy in patients who are intolerant to statins and fibrates.

LINE EXTENSIONS

Estradiol-17 β
(*Estradot*[®])
25mcg transdermal system

For the treatment of menopausal symptoms in women for whom oral forms of HRT are not tolerated or indicated.

Risperidone
(*Risperdal M*[®])
0.5mg, 1mg, 2mg
orally disintegrating tablets

- For the management of manifestations of schizophrenia and related psychotic disorders. Advice from a psychiatrist is suggested prior to starting therapy.
- For use in severe dementia for the short-term symptomatic management of inappropriate behavior due to aggression and/or psychosis.
(Risperidone 0.25mg, 0.5mg, 1mg tablets are regular benefits of Plans A and V).

Prescriptions written by New Brunswick psychiatrists do not require special authorization. Subsequent refills ordered by other practitioners will not require special authorization.

DRUGS REVIEWED AND NOT LISTED

The reviews of the following products found that they did not offer a therapeutic and/or cost advantage over existing therapies. Requests for coverage through special authorization will not be considered.

Ciprofloxacin	<i>(Cipro XL[®])</i>	500mg tablets
Desmopressin	<i>(Minirin[®])</i>	0.1mg tablets
Pimecrolimus	<i>(Elidel[®])</i>	1% cream
Telithromycin	<i>(Ketek[®])</i>	400mg tablets
